

10 tips for creating change with your data

Always keep audience in mind!

TIPS: Making data look good		Examples of how to apply this tip	What might this look like?
1	Align text, objects, and shapes	<ul style="list-style-type: none"> Use the "shape format" PPT menu to align & distribute objects Group (right-click menu) objects so they move together 	 <p>Not aligned → Left-aligned</p>
2	Buffer for "white space"	<ul style="list-style-type: none"> Leave enough empty space around graphics/text and within them (such as line & paragraph spacing) 	 <p>The dotted lines show the white space here</p>
3	Choose a color palette*	<ul style="list-style-type: none"> Use colors that complement each other (via Word & PPT "design" tab, or sites like https://www.colourlovers.com/ or https://colors.co/) Match colors with HEX codes or eyedropper (see Word/PPT color menus) 	 <p>Palette for this handout</p>
4	Don't overcomplicate graphics	<ul style="list-style-type: none"> Use large photos, remove borders of photos/graphics/icons Find graphics in Word/PPT ("insert" menu → pictures → stock images), through Creative Commons, Canva, Noun Project 	 <p>About our Program → About our Program</p>
TIPS: Making data digestible		Examples of how to apply this tip	What might this look like?
5	Check: Do you even need a chart?	<ul style="list-style-type: none"> Don't make charts for the sake of charts Consider the simplest and most impactful way to share your message with your specific audience 	 <p>Confusing chart → Here is my take-home point.</p>
6	Say what you mean	<ul style="list-style-type: none"> Don't leave the reader guessing; just tell them your key message, in a way appropriate for your audience This applies to chart titles! They need not be "neutral" in most cases. 	<p>"Average arts funding and race/ethnicity, by school" → "Schools with less arts funding have more Black students"</p>
7	Declutter your charts	<ul style="list-style-type: none"> Remove borders, choose a narrow font, and replace axes with directly labeled datapoints when possible 	 <p>School A → School A 12 counselors School B → School B 2</p>
8	Use color intentionally*	<ul style="list-style-type: none"> Use color to make your main point(s) stand out or to convey meaning For charts, avoid using colors for the sake of being colorful 	<p>More colorful → More Intentional</p>
9	Avoid pie charts (mostly)	<ul style="list-style-type: none"> Don't use pie charts when you have more than 2-3 categories; they are hard to interpret! Try the built in "stacked bar" option. 	<p>Harder to interpret → Easier to interpret</p>
10	Consider out-of-the-box chart types	<ul style="list-style-type: none"> Simple, less-used charts can be appealing and impactful For more training on simple, impactful chart development, we recommend Stephanie Evergreen's "Chart Starter Series" 	 <p>Waffle plot</p> <p>I am easy to read and easy to make (just a table with shaded cells)</p>

*Keep in mind color contrast (for accessibility) and cultural meanings of color or other icons/symbols or chart decisions (e.g., how time is depicted). To support accessibility, do not rely on color as the only cue to explain your data.
